

Quick Facts

- ◆ Computerized Provider Order Entry (CPOE) with Clinical Decision Support (CDS)
- ◆ Creates an imaging order customized for each patient
- ◆ Internet access – compatible with all major browsers
- ◆ User friendly; common point-and-click application
- ◆ Easy to follow screens and prompts
- ◆ Improves communication between healthcare providers
- ◆ Saves referral time
- ◆ No need for cumbersome pre-certification
- ◆ Offers best medicine alternatives
- ◆ Tracks and documents the clinical decision process
- ◆ Meets HIPAA requirements

RadWise®

A point-of-care tool providing management of medical imaging

The Need

Radiology expenses account for about **10% of the total health care dollar**, or at least \$10 - \$14 per covered life per month for most employers. This figure grows **approximately 15-20%** each year because of advances in medicine and equipment—a key contributor to the rapid growth of health care costs. **Most disturbing: 30-40% of these costs are attributed to inappropriate tests or medical errors.**

The Solution

RadWise—an evidence-based, point-of-care Internet application helps physicians select, document and order the most appropriate radiology procedure. It **guides the appropriateness** based upon proven medical evidence, **reduces expenses** associated with the imaging process by \$2-\$4 per covered life per month and **improves quality** and outcomes by reducing errors.

A physician-directed tool, the **RadWise** solution is bi-directional, or **MD-to-MD**, replacing conventional utilization management with a more direct and efficient technology-driven process. The result is greater physician accountability, better communication, improved quality and cost savings.
