

RxTracker

A single, comprehensive ePrescribing solution that integrates seamlessly with VistA/CPRS

RxTracker is a comprehensive web-based electronic prescribing solution that gives providers a streamlined ePrescribing process. This allows VA providers to work smarter, keep Veterans safer and provide them with a choice to get prescriptions at community retail pharmacies.

Integrated Automated ePrescribing

Medication Orders are entered into VistA/CPRS to allow MOCHA checks to occur. A CPRS Tools menu allows Prescription information to be seamlessly sent to RxTracker Pharmacy orders and submitted via the Surescripts network of pharmacies using appropriate certified methods.

Community pharmacies can send notifications to the VA about order fulfillment, questions, cancellations, etc. These messages appear in the RxQueue for providers to address.

ePrescriptions sent to community pharmacies are recorded in VistA/CPRS as Non-VA Medication Orders for a Veteran.

Electronic Prescribing of Controlled Substances (EPCS)

RxTracker consolidates and automates the electronic prescription process for all medications, including controlled substances. If a patient is taking a combination of controlled and non-controlled substances, users can create one medication list, and RxTracker will automatically manage the details.

It is fully compliant with Meaningful Use (MU) and all state and federal regulations providing flexible two-factor authentication options for identity proofing. RxTracker leverages the First Data Bank (FBD) State and Federal Module Controlled Substances Module™ (including the most current State and Federal DEA schedules).

A Configurable, Compliant System

RxTracker is highly configurable to suit your unique needs, while remaining fully compliant with all applicable regulatory requirements. Leveraging information from FBD, RxTracker offers the most current medication options and common ordering sentences automatically.

RxTracker Features

- + Integration with Vista/CPRS
- + ePrescription can have VA Billing information sent with it (i.e. Authorization information)
- + EPCS
- + RxQueue provides reporting and auditing tools

Certifications

RxTracker is compliant/certified with the following:

Surescripts Certified including NCPDP
2017071 Script
